

PROJECT NAME: QUICKTUBE LIVE SEARCH WEB APP

PROJECT PURPOSE:

QuickTube is a responsive web application that allows users to search for YouTube videos and see results instantly as they type. It solves the problem of slow, traditional search experiences by providing real-time suggestions and quick access to video content. This tool is useful for users who want fast browsing and for beginner developers learning API integration and dynamic UI updates.

SCOPE:

Included: live search functionality, video thumbnails, titles, channel names, and responsive design.

Not included: user accounts, video uploading, comments, or advanced filtering features.

DELIVERABLES:

A fully functional web app with live search, styled UI, responsive layout, and deployed website link.

SMART GOALS

- Build a live search feature that displays YouTube video results dynamically using JavaScript by 8 May 2026.
- Design a responsive UI using HTML, CSS, and JavaScript that works on desktop by 8 May 2026.
- Integrate the YouTube API to fetch and display video thumbnails, titles, and channel names by 8 May 2026.
- Deploy the completed project using Netlify by 8 May 2026.
- Complete at least 3 coding practice improvements (DOM manipulation, API handling, responsive design) by project end.

WORK BREAKDOWN STRUCTURE

Timeline & Milestones

<i>Phase</i>	<i>Dates</i>	<i>Milestones</i>	<i>Dependency</i>
Setup	day 1	Project initialized	None
UI Design	day 2	Layout Complete	Setup
Functionality	day 3/4	Live search working	UI Design
Testing	day 4/5	bug fixes	Functionality
Deployment	day 5	site live	Testing

Risk Identification & Mitigation

1. API Issues

- Likelihood: Medium
- Impact: High
- Mitigation: Use fallback/mock data if API fails

2. Time Management

- Likelihood: High
- Impact: High
- Mitigation: Focus on core features only (no extra features early)

3. Skill Gaps (JavaScript/API)

- Likelihood: Medium
- Impact: Medium
- Mitigation: Use Zio tutorials + practice small examples first

4. Bugs in Live Search

- Likelihood: High
- Impact: Medium
- Mitigation: Debug step-by-step, test frequently

Success Criteria

Functional Requirements

- Live search updates results while typing
- Displays video thumbnail, title, and channel
- Fully responsive design

Quality Standards

- Clean, readable code
- Fast loading results
- Works on mobile and desktop

Learning Outcomes

- DOM manipulation
- API integration
- Responsive design

Definition of Done

- Project deployed and working
- All core features functional
- No major bugs
- Ready to showcase in portfolio
